

Technip awarded umbilical contract in Vietnam

June 15, 2011

Technip announces that its wholly-owned subsidiary DUCO Ltd. has been awarded a contract, by BP Exploration Operating Company Limited, worth approximately €15 million for the Lan Do field development in Vietnam. This field is located 320 kilometers south of Ho Chi Minh City, at a water depth of 120-180 meters.

The contract includes the engineering, project management and fabrication of a main umbilical* and an infield umbilical. The umbilicals will utilize a hybrid technology developed by DUCO, which uses steel tube and thermoplastic hose fluid conduits for hydraulic control and chemical injection services. They will be delivered in the first half of 2012.

The project will be executed in Technip's umbilical facilities in Newcastle, UK and in its new state of the art flexible pipe and umbilical manufacturing facility, Asiaflex Products, located in Johor State, Malaysia.

The award follows the recent successful delivery of the umbilical systems for BP's Skarv development in Norway and builds on Technip's track record in umbilical supply to BP stretching back over 25 years.

* Umbilical: an assembly of hydraulic hoses and/or steel tubes which can also include electrical cables or optic fibres used to control subsea structures from a platform or a vessel.
